EDUCATION

University of Toronto

Expected graduation: May 2027

Bachelor of Computer Science and Physics / Minor in mathematics

Toronto, ON

- Courses: Probability and Statistics, Machine Learning, Time Series Analysis, Operating Systems, Computer Architecture, Database System, Parallel Programming

TECHNICAL SKILLS

- **Languages:** Python, SQL (PostgreSQL), Java
- **DevOps :** Linux, Git, Docker, CircleCI, Github Actions, AWS Lambda

EXPERIENCE

Software Engineering Intern

May 2025 – Present

Foresters Financial

Toronto, ON

- Collaborated with actuarial analysts to build a mortality claims predictive-analysis workflow on Databricks using SHAP-interpretable models.
- Reduced the batch data processing pipeline from **30 to 20 minutes** by implementing PySpark logic.
- Building an internal cross-platform LLM-usage dashboard for finance department with a FastAPI backend, HTML/Bootstrap CSS/vanilla Javascript frontend, and Azure PostgreSQL.

Machine Learning Research Intern

Oct 2024 – Present

UTMIST/UHN | Supervisor: Jürgen Germann

Toronto, ON

- Selected to present work at IEEE EMBS 12th Annual International Conference on Neural Engineering (2025). and NeurIPS 2025 workshop.
- Achieved **80%** test accuracy using PyTorch 3D CNN and ResNet by curating and preprocessing **400+** 3D brain images and metadata.
- Standardized data transforms and tracked experiments with Hydra configs and Weights & Biases to improve team reproducibility and review.

Software Engineer / Data Science Intern

May 2024 – Sep 2024

Kiconia Works

Tokyo, Japan

- Automated manual visitor check-ins (**50/day**) via a full-stack system: Django/PostgreSQL backend and HTML/Tailwind CSS front end.
- Containerized services with Docker, deployed as AWS Lambda, and set up CircleCI for automated build/test/deploy.
- Authored technical documentation for MQTT/Alexa integration, and database schemas to speed onboarding.
- Modeled click-probability datasets from real estate website (**1k+ users, 150k+ listings**) using Pandas and generated PyTorch-ready inputs for downstream analysis.

PROJECTS

Squill

Jan 2026

- **Won the Foresters Financial Track** at a UofTHacks 13 (**500+** participants).
- Built a multi-agent AI system using LangGraph to assist with scholarship applications, combining a TypeScript frontend with a Python Flask backend.

imageEHR

March 2025

- **Best Google Healthcare AI — GenAI Genesis 2025** (**150+** projects, **550+** participants).
- Built a monolith that generates regulatory-ready patient summary data from synthetic EHR + chest X-rays by integrating **YOLO** abnormality detection.

hddviz

March 2026

- Built a HDD storage-visualization CLI tool in Go with **no third-party dependencies**.
- Automated releases using Homebrew and a GitHub Actions CI/CD pipeline.
